

Carb Care 0-0-2

- Supports soil microbes
- Enhances nutrient uptake
- Application flexibility: spray, drench, or inject
- Manages soil moisture

Carb Care is a unique dual-action formula containing complex carbohydrates and a powerful soil surfactant, designed to energize both plant and soil health. Carbon-rich compounds provide a food source for critically important soil microbial populations, while also supporting root growth, enhancing soil nutrient uptake, and providing bioavailable potassium. The soil surfactant penetrates hard-to-wet soils, enhances infiltration, and moves the rich carbon sources into the root zone for effective plant and soil nutrition. Carb Care can be surface-applied to golf courses, lawns, and landscapes, soil-injected, or applied as a drench for nursery, greenhouse, or landscape use.

CARB CARE 0-0-2

GUARANTEED ANALYSIS:

Soluble Potash (K_2O) 2.0%

Derived from Potassium Hydroxide, Tetra Potassium EDTA

ALSO CONTAINS NON-PLANT FOOD INGREDIENTS

Blend of surfactants and Carbon

Application Rates	
Golf Greens, Tees, & Sports Turf	2-6 fl oz per 1,000 FT ² every 7-14 days.
Golf Fairways & Lawn care	1-3 fl oz per 1,000 FT ² every 14-21 days.
Ornamentals	32 fl oz per 100 gallons of water, applied as a drench every 7-14 days.
Arbor	32-64 fl oz per 100 gallons of water, applied via soil injection, drench, or spray. 2 inch DBH caliber tree requires 1.5 gal solution within the tree drip line area and 1 foot from the flare of the tree.
Nursery	Dilute at 1:100 1% solution and apply as a drench before and after planting.
