

LANDSCAPE AND FLOWER PROGRAM

Annual color transplants need to establish roots quickly in order to maintain flower integrity and plant strength throughout the growing period. Annuals are very often planted in the same

flower beds year after year. Using soil amendments will help to create a healthier soil and in turn healthier plants.

THIS NUTRITIONAL PROGRAM WILL:

- Provide continuous feeding with slow release nitrogen.
- Will not burn roots, since it has a low salt index.
- Is easy because of their liquid formula.
- Add organic carbon and improves soil structure.
- Increase root mass.
- Add simple and complex sugars, which make plants stronger and more resistant to stress.
- Increase blooms and plant life.

LANDSCAPE AND FLOWER PROGRAM

Page	Product	Mixing And Delivery	Frequency	Comments
24	StarterPlus Bloomtastic 8-32-5	Hand watering: Mix 1/2-3/4 teaspoon of Bloomtastic per gallon of water	At Time of planting and repeat in 2 weeks	High Phosphorous application for initial establishment and growth
WITH				
7	Arbor Care 15-8-4	Mix 1 fl oz of Arbor Care in 1 gallon of water	Spray until runoff monthly	Combination of quick and slow release nitrogen for continuous feeding plus micronutrients
AND				
3	Essential 1-0-1	32-64 fl oz per 100 gallons of water	Monthly	Feeds soil microbes and includes beneficial plant hormones
AND				
3	Companion Maxx 2-0-1	32-64 fl oz per 100 gallons of water	Monthly	Bacillus soil amendment controls root and foliar disease
